

Write a Prolog Program for A DB WITH NAME,DOB.

Aim: to A DB WITH NAME ,DOB using

python **Algorithm:**

- Start
- Define facts containing a person's name and date of birth (DOB).
- Create a Prolog predicate person(Name, DOB) to store the details.
- Accept the name as input from the user.
- Search the database for the given name.
- If the name is found, display the corresponding DOB.
- If the name is not found, display "Person not found".
- Stop.

Program:

```
% define some facts about people and their
DOBs dob(john, date(1990, 5, 1)). dob(jane,
date(1985, 12, 10)). dob(bob, date(1978, 2, 28)).
dob(sue, date(1995, 8, 15)). dob(tom, date(2000,
4, 22)).

% define a predicate to look up a person's DOB by
name lookup(Name, DOB) :- dob(Name, DOB).

example query: lookup john's DOB
```

?- lookup(john, DOB).

DOB = date(1990, 5, 1).

% example query: lookup sue's DOB

?- lookup(sue, DOB).

DOB = date(1995, 8, 15).

Output:

```
?- lookup(john, DOB).  
DOB = date(1990, 5, 1).  
  
?- lookup(sue, DOB).  
DOB = date(1995, 8, 15).  
  
?-
```

Result:

Hence the Prolog Program for A DB WITH NAME, DOB is done.
